

## Block Copolymer Nanostructuring - Amphiphilic Block Copolymers as Templates for Particle Formation and Positioning (Paperback) - Common

Block copolymers are fascinating materials that have attracted a lot of attention in recent years, as a consequence of their ability to serve as ideal building blocks to fabricate nanostructures. They are macromolecules consisting of chemically different parts (blocks) that tend to self-assemble into well-ordered nanoscaled structures both in bulk and in a selective solvent for one of the block. I...
