

Bulletin - Wisconsin Geological and Natural History Survey Volume 47-50

This historic book may have numerous typos and missing text. Purchasers can usually download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1916 edition. Excerpt: ... mineral matter is mingled with the organic material, but it is hardly sufficient to warrant classing the soil as Muck. The soil is underlain usually by a light-gray mottled clay and in local spots by grayish sand. Deposits of marl occur under some of the Peat marshes. Topography and drainage.--By far the greater proportion of the surface of the Peat is flat. There are, however, a number of places where the areas lie on gentle slopes or where the surface is gently undulating. The drainage of the Peat is naturally very defective, and only a small proportion of it can be farmed without first installing some sort of a drainage system. Origin.--Peat owes its origin to the accumulation of organic matter resulting from the growth and decay of rank water-loving vegetation. Marsh grasses, sedges, and sphagnum moss have added much material, but the leaves, limbs, and roots of trees have also helped to build up the deposits. Native vegetation.--About 15 to 20 per cent of the Peat is timbered with tamarack, and the remainder as covered with coarse marsh grass. Present agricultural development.--Only a very few small areas of the Peat are under cultivation at present. The marsh grass yields large quantities of hay, which can be readily cut during dry seasons. In wet seasons, however, the ground is too soft to support a team. As a rule the marshes are cut into small tracts and owned by the farmers on the surrounding upland, who depend on the marshes for hay in dry seasons, when the upland crop is apt to be a failure. A few patches of corn were seen growing on the Peat, though most of this was where mineral matter had been washed in from the upland and mixed with the Peat. On

some of the gentle slopes where the Peat was quite fibrous and only partially...
