

The Canadian Naturalist and Quarterly Journal of Science with the Proceedings of the Natural History Society of Montreal (Volume 5)

THE CANADIAN NATURALIST AND
QUARTERLY JOURNAL OF SCIENCE
WITH THE PROCEEDINGS OF THE
NATURAL HISTORY SOCIETY OF
MONTREAL • VOLUME 5

This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1870 Excerpt: ... instance the coarsely granular series of rock families the general range of their specific gravities may be said to be as follows:--Granite----2.65 and under. Granite---2.65 (o 2.8. Syenite 2.8 to 2.875. Greenstone----2.875 to 3.--This part of the subject is one of very great interest, but it would be premature at present to discuss it minutely. To be continued)
NOTES ON THE BOTANY OF A PORTION OF THE COUNTIES OF HASTINGS AND ADDINGTON. By B. J. Harrington, B.A., During a portion of the summer of 1869, I accompanied Mr. Vennor as his assistant in his exploration, among the Laurentian rocks of Ontario, and although my labours were of necessity for the most part geological, I could not resist the temptation of taking an occasional botanical stroll, and jotting down the names of a few old and familiar friends. While many other Townships were entered, it was principally in those of Elzevir, Kaladar and Barrie that attention was given to Botany. The hilly and broken character of the Laurentian country is well known, and this, together with the imperfect drainage of the crystalline rocks, and the frequently scanty and light soil arising from their disintegration, cannot well fail to exert a marked influence upon the vegetation. Thus, among the granitic hills of Elzevir, Caprifoliaceae are exceedingly abundant, fourteen species being represented. Of the genua Viburnum there were five species, several of these being very common. In the lower ground Ericaceous shrubs, and in some places, more particularly in cedar (*Thuja occidentalis*) swamps, several species of northern Orchids were found. I say low

ground, but there is much of the country having this character which is in reality elevated, the imperfect drainage, mentioned above, causing the formation of bogs, ...
