

Calculus I Pb (Bk. 1)

Each chapter in this book deals with a single mathematical topic, which ideally should form the basis of a single lecture. The chapter has been designed as a mixture of the following ingredients: -(i) Illustrative examples and notes for the students pre-lecture reading. (ii) Class discussion exercises for study in a lecture or seminar. (iii) Graded problems for assignment work.

Contents

1 Sets, functions page 11

2 Limits and continuity 17

3 The exponential and related functions 25

4 Inverse functions 30

5 Differentiation 35

6 Differentiation of implicit functions 44

7 Maxima and minima 50

8 Curve sketching 54

9 Expansion in series 61

10 Newtons method 67

11 Area and integration 72

12 Standard integrals 80

13 Applications of the fundamental theorem 87

14 Substitution in integrals 94

15 Use of partial fractions 100

16 Integration by parts 106

Answers to problems 110

Index 116

1 Sets, Functions A set is a collection of distinct objects. The objects belonging to a set are the elements (or members) of the set. Although the definition of a set given here refers to objects, we shall in fact take objects to be numbers throughout this book, i.e. we are concerned with sets of numbers. Illustrative Example 1: Set Notation We give straight away some examples of sets in set notation and explain the meaning in each case.
