

Laboratory Directions and Study Questions in Inorganic Chemistry (Classic Reprint)

Excerpt from Laboratory Directions and Study Questions in Inorganic Chemistry

The following loose-leaf Laboratory Directions which have been tried and corrected in our laboratories for the past five years are now presented in printed form for the benefit of other institutions. In the University of Pittsburgh the student will, on an average, complete one set of experiments per three-hour period. He is scheduled for two such periods per week throughout the college year. Results are noted on a separate sheet and submitted with the instruction sheet at the end of each period. Both the direction sheet and record sheet are stamped by the instructor before they are returned to the student. A word should be said about the study questions which constitute the second half of this volume. These serve as a study guide for the student. Questions of major importance are starred. All recitations and examinations are conducted on the basis of these questions so that a uniform system is employed even where a dozen or more instructors handle different sections. The method has met with such marked success here that there is no doubt about its success when introduced into other institutions. The authors will welcome notice of errors found in this volume and invite suggestions from those who have occasion to use it. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. Find more at www.forgottenbooks.com This book is a reproduction of an important historical work. Forgotten Books uses state-of-the-art technology to digitally reconstruct the work, preserving the original format whilst repairing imperfections present in the aged copy. In rare cases, an imperfection in the original, such as a blemish or missing page, may be replicated in our edition. We do, however, repair the vast majority of imperfections successfully; any

imperfections that remain are intentionally left to preserve the state of such historical works.
