

## Chemistry: embracing the metals and elements which are not metallic

This volume is produced from digital images created by the Internet Archive for The University of Toronto Libraries. The Internet Archive and The University of Toronto Libraries seek to preserve the intellectual content of items in a manner that facilitates and promotes a variety of uses. The digital reformatting process results in an electronic version of the original text that can be both accessed online and used to create new print copies. To enhance your reading pleasure, HP's patented BookPrep technology is used to clean and remove aging as well as scanning artifacts. **Chemistry embracing the metals and elements which are not metallic** not match chemical reality. Crucial chemical and biochemical processes depend on the changing oxidation state of certain elements. The heavy metal-sulfur bond represents a typical soft embrace. The metal-sulfur compound formed tends to be insoluble in water and thus not easily excreted.
