Elements Lanthanum (57) through Lutetium (71) on the periodic table are considered to be Lanthanides. Lanthanides tend to react with oxygen to form oxides. The Lanthanide Contraction refers to the decrease in atomic size of the elements in which electrons fill the f-subshell. **The Chemistry of the Lanthanides : Therald Moeller : Free Download** Over the past ten years a resurgence of interest in the lanthanides chemistry has been noticed, especially in the biomedical applications of these elements. **Chemistry of the lanthanides (Moeller, Therald) - Journal of** Lanthanides are a series of 15 elements of the 4f-block they have similar chemical properties and are known as rare earth metals.
