

# Wastewater Characteristics, Treatment and Disposal: Biological Wastewater Treatment Series Volume 1

Wastewater Characteristics, Treatment and Disposal is the first volume in the Biological Wastewater Treatment series, presenting an integrated view of water quality and wastewater treatment. The book covers the following topics:

- . wastewater characteristics (flow and major constituents)
- . impact of wastewater discharges to rivers and lakes
- . overview of wastewater treatment systems
- . overview of sludge treatment and disposal
- . complementary items in planning studies.

This book, with its clear and practical approach, lays the foundations for the topics that are analysed in more detail in the other books in the series. The Biological Wastewater Treatment series is based on the book Biological Wastewater Treatment in Warm Climate Regions and on a highly acclaimed set of best selling textbooks. This international version is comprised by six textbooks giving a state-of-the-art presentation of the science and technology of biological wastewater treatment. Titles in the Biological Wastewater Treatment series are: Volume 1: Wastewater Characteristics, Treatment and Disposal Volume 2: Basic Principles of Wastewater Treatment Volume 3: Waste Stabilisation Ponds Volume 4: Anaerobic Reactors Volume 5: Activated Sludge and Aerobic Biofilm Reactors Volume 6: Sludge Treatment and Disposal
